Circular connectors STX M12x1 IP67

Connector series for industrial applications

STX M12x1 IP67 connector series

With the STX M12x1 IP67 connector series, Telegärtner offers solutions for the demand of the industry for consistent cabling of industrial communication networks in accordance with IEC 61918 which prescribes M12x1 circular connectors in 4- and 8-pole versions as a plug interface.

The series contains M12x1 D- and X-coded connectors which are suitable for connecting to both solid conductors and stranded wire cables as well as offering 360° shield contacting.

Another part of the STX M12x1 IP67 connector series are printed circuit board bulkhead sockets with housings for front or back mounting.

The range is rounded off by pre-assembled connecting cables for the device connection between machines/terminating equipments or machine/terminating equipment to the control cabinet.

Designed for transmitting maximum data rates in industrial applications

As 4-pole, D-coded compact connectors in Cat.5e, the M12 from Telegärtner can transmit data rates up to 100 Mbit/s in the PROFINET environment. X-coded in Cat.6A, the 8-pole version can transmit data rates up to 10 Gbit/s according to IEC 61076-2-109:2014. The high bandwidth is ensured by separating the four pairs transmission technically by a cross shield (X-coding). Additionally a power supply to connected terminating equipments is possible.

The STX M12x1 connector series can be used for applications such as security and video surveillance (CCTV), passenger information systems (PIS), production systems or production monitoring with high-resolution cameras. Users can connect X-ray machines for baggage inspection at airports, for example, encapsulated and safe from manipulation with the M12 circular connector. But the M12 is also a real trump card in railway vehicles: It helps to distribute the increasing data volume reliably and to transmit the data to all connected systems and devices in the train, for example, to cameras or switches.

STX M12x1 Bulkhead Sockets X-coded IP67

An important part of the STX M12x1 connector series are the bulkhead sockets in Cat.6_A. They are available with housings for front or back mounting as well as versions without housings with a fourfold shield connection to the printed circuit board and feature versatile mounting possibilities.

STX M12x1 Cable Plug X-coded IP67

The basic structure of the new Telegärtner connector with X-coding corresponds to M12 system in world-wide use that has found its way into applications in many different branches with extreme conditions thanks to its compact design and industrial compatibility. The extremely robust M12x1 connector in Cat.6_A from the STX

programme can be fitted on site without any special tools. This assembly-friendly connector also features very good shield contacting and covers a wide range of wire diameters (0.9 – 1.6 mm) and cable diameters (5.5 – 9 mm).

STX M12x1 Connecting Cable X-coded

For the connection between machines or other terminating equipments as well as connection of the machine or terminating equipment to the control cabinet, Telegärtner also offers pre-assembled connecting cables in Cat.6A. The connecting cables M12x1 with x-coding have an S/FTP 4x2xAWG26/7 PUR structure and are suitable for an increased temperature range of -40° C to + 85° C.

Assembly of the STX M12x1 connector X-coded

Thanks to an intelligent wire management and a simple screw connection system, the individual components of the STX M12x1 cable plug can be assembled quickly and easily on site completely without the use of special tools.

Step 1: Prepare cables

- Slide over cable gland and seal at least 40 mm
- Remove outer jacket, fold braid shield backwards
- Pre-sort pairs of wire

Step 2: Insert cables

- Insert pairs of wire into the wire manager, actuate the shield spring
- Untwist pairs of wire, insert the individual wires into the wire manager and cut off protruding wire flush

Step 3: Screw on connector

- Insert wire manager into plug body (pay attention to position)
- Tighten the cable gland with an open-ended wrench
- Use an additional seal for cable diameters between 5.5 and 7.5 mm
