

# FO Patch Cords and Patch Panels with Adaptors in Violet

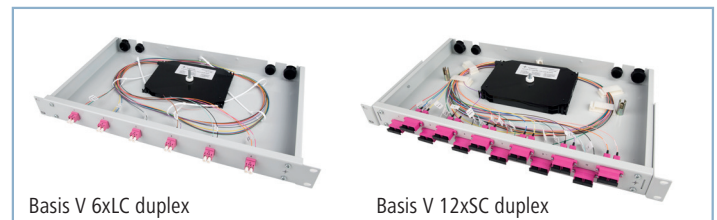

Different colours for different fiber optic connectors and adaptors make working life easier. Users can identify the fiber type and so know about the performance of the optical link at a glance. EN 50137-1:2011 specifies only beige and black as colours for multimode connectors. So it is no wonder that additional colours outside the standards specifications

have become popular. In addition to the standard-compliant colour black, Telegärtner offers patch cords as well as connectors and adaptors in patch panels using OM4 multimode fibers also in violet, which makes operation and administration of fiber optic connections much easier.
